## Flexible Grouping Strategies

| Grouping Strategy | Strategy Information |
| :--- | :--- |
| 1. Proximity Partners |  |
| Think-Pair-Share | $\begin{array}{l}\text { Students start thinking independently, then pair } \\ \text { up with a partner to share. The partners then } \\ \text { share their thoughts back to the larger group. } \\ \text { Partner A can share partner B's thinking, }\end{array}$ |
| Think-Pair-Square | $\begin{array}{l}\text { Let students think personally, then pair up with } \\ \text { a partner to share thoughts, then meet in } \\ \text { groups of four to share thoughts. }\end{array}$ |
| Second-Set-Partners | $\begin{array}{l}\text { Allow students to have a conversation with one } \\ \text { partner, then find a different partner and recap } \\ \text { the thoughts of their original partner. }\end{array}$ |
| 2. Get Moving |  |
| Card Deck Groups | $\begin{array}{l}\text { A deck of playing cards provides an infinite } \\ \text { amount of ways students can be moved around } \\ \text { into collaborative groups to share their work or } \\ \text { ideas. The notion that students need to get up } \\ \text { and locate their group or partners helps } \\ \text { stimulate motivation and engagement. }\end{array}$ |
| Compass Partners | $\begin{array}{l}\text { This strategy starts by having students line up } \\ \text { on a value line, then the line folds in half and } \\ \text { viewpoints are shared. }\end{array}$ |
| Grid Pairs/Groups | $\begin{array}{l}\text { This strategy is more student driven and allows } \\ \text { them to pick a different partner each time. } \\ \text { Students meet with their partner, record the } \\ \text { date in their partners box, and then cycle } \\ \text { through all other students in the classroom. } \\ \text { Once a student has met once with everyone, } \\ \text { they may use the second date to meet again. }\end{array}$ | \(\left.\begin{array}{l}A strategy that can create a multitude of <br>

different partner groupings. This strategy works <br>
well for frequently changing student groups.\end{array}\right\}\)

| 3. We Agree |  |
| :--- | :--- |
| Would You Rather? | This strategy gives students some choice, and <br> therefore adds an element of engagement. <br> Students also have the opportunity to reflect on <br> their learning preferences if given two differing <br> options of choice (ex. Listening to a podcast vs. <br> Reading an article on the same topic). |
| Table Topics | This strategy can be used to positively set up <br> flexible grouping near the beginning of the <br> school year as it offers an opportunity for <br> students to build curious relationships with one <br> another. Teachers start by offering a student <br> survey focused on topics such as favorite <br> snacks, movies, travel goals, ect... the teacher <br> then forms groups based on similar or <br> non-similar interests. Students then enter the <br> learning space with an assigned table topic, an <br> assigned table, and a list of the group <br> members. This may be posted on the <br> classroom door. Students head to their table <br> and break the ice by discussing why they <br> choose what they did. |
| Four Corners | A discussion topic is applied to each corner of <br> the learning space and students engage with <br> other students to talk through and share <br> understandings of the topics. |

| J. You Choose |  |

| 5. Formative Formations |  |
| :--- | :--- |
| Team Huddles | In the case that your students get working in <br> groups on a task, and you've forgotten to <br> highlight an important element, you can get a <br> member from each group to form a team <br> huddle with you. The information you share is <br> then taken back to the groups. This also works <br> if you find throughout your observations that <br> students are missing a critical element in their <br> thinking process. |
| Self-Assessment Groups | After starting class with a mini lesson, students <br> then self-assess their readiness to engage in a <br> follow-up task. Students might identify as an "A" <br> if they require a deeper explanation, " "B" if <br> they just need to ask a few clarifying questions <br> before starting the next task, or a "C" if they feel <br> confident and ready to go. |
| Like-Pattern Groups | Using recent assessment data, students are <br> grouped based on similar areas of needed skill <br> development. For example, a teacher might <br> form five different writing groups based on a <br> collection of paragraphs written the day before. <br> These groups might look like paragraph <br> structure, content, or capitalization. |
| Learning Stations | Students cycle through various stations <br> focused on developing specific skills. For <br> example, a teacher could divide a class into <br> three groups, with the groups cycling through a <br> teacher station, a game station, and a <br> collaborative practice station. |
